

A new age

With 27 years' research behind it, Indiba Deep Beauty's Proionic Body Care System helps to rejuvenate the face and body.

The Indiba treatments use regenerative radio frequency, which harnesses the exclusive Proionic effect to mobilise and energise ions in the skin, with high frequency currents to raise the internal temperature of human tissue - providing energy inside the body. It optimises the ionic exchange to balance the electric potential in the tissue, bringing new life to the skin, both in firmness and tone. Using radio frequency, its deep and pain-free action can also be used to dramatically improve the visible signs of cellulite, regenerate cells, reshape the body and lift and firm targeted areas.

The Indiba Deep Beauty face treatments can be customised to each client, improving un-toned, sagging skin, under eye bags and dark circles, fine lines and deep wrinkles, double chin, scars and delivering overall skin luminosity.

One of the anti-ageing treatments available is the 30 minute Anti-Ageing Face Treatment. This has been clinically proven to restore youthful qualities to the skin, reducing the width and depth of wrinkles, adding skin moisture and increasing the firmness of the skin. The anti-wrinkle effect was shown to restructure the skin's surface resulting in greater elasticity and the presence of new collagen fibres.

30 Minute Anti-Ageing Facial Treatment

Skin complaints:

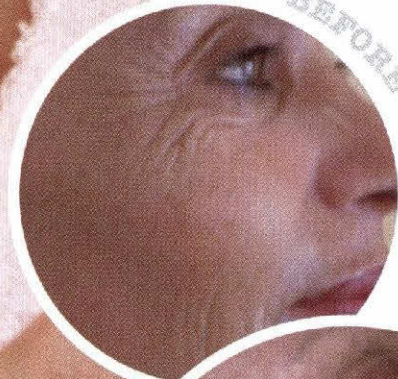

Sagging skin, loss of jaw line, 'double chin', wrinkles, expression lines, rosacea and nasogenian folds (the line that forms between the outer lip and nose as a result of sagging fatty tissue from the cheek).

Treatment benefits:

Promotes regeneration, tightens skin, provides radiance, reduces wrinkles and fold, enhances muscle tone and re-shapes the jaw line.

Treatment includes:

1. Channelling energy - the channelling of energy from key energy points on the face and neck.
2. Capacitive treatment on the neck, jaw line, cheeks, eyebrows, chin line, eye contour, upper lip and wrinkles and folds.
3. Resistive treatment working on the muscle layers in the face.
4. Final balance: resistive treatment - hands on treatment using the resistive electrode on the back of the therapist's hands applied to face and neck.

20 Minute Under Eye Bags Treatment

Skin complaints:

Swelling of lower eyelids, hardness and fat bags under the eyes, sagging skin and drooping eyebrows.

Treatment benefits:

Increases the blood flow and microcirculation, improves skin elasticity and reduces fat bags.

Treatment includes:

1. Channelling energy - eight minutes. The channelling of energy from key energy points on the face and neck.
2. Capacitive treatment - six minutes on the eyelids and fat bags.
3. Resistive treatment - four minutes working on the eye contours and concentrating on the eye bags.
4. Final balance: resistive treatment - two minutes hands on treatment using resistive electrode on the back of the therapist's hands to remodel the eye contour area and rebalance muscle tone around the eyes.
